

SDS T3 Masonry Drill Bits

SDS T3 Multifit shank sizes will fit all SDS Machines including all Ramset and Hilti machines. EVO Plus is the latest carbide tip technology leads to increased penetration rates and more efficient cutting. 'Point thinning' aids start up and reduces wander. Produces clean and accurate holes for optimum fit of fixings. Tip technology enables user to drill into multiple materials. Precision machining produces optimum support behind the seated tip, also ensuring precise tip alignment resulting in hole concentricity. Copper brazing to 1100° gives ultimate bond between body and tip. Speed of penetration and efficiency of cut enables significant increase in number of holes per cordless battery charge. Up to 25% more holes can be drilled with the same charge. Newly evolved grade of carbide used ensures extended tool life and maximises number of holes drilled. Flute geometry is designed to cope with the maximum amount of spoil removal with the core width being the optimum cross sectional area. Combination of flute and tip geometry produces truer and rounder holes. Extra long 1000mm are available to broaden the appeal and prove versatile for most deep masonry drilling applications.

NB: When using drill bits 450mm long and over, a pilot hole using a shorter length bit of the same diameter must be drilled first.

SDS T3 Masonry Drill Bits (continued)

- * Latest carbide tip technology - increased penetration and efficiency of cut.
- * Ideal for cordless drills with increased numbers of holes per battery charge.
- * Grade of carbide ensures extended tool life and number of holes drilled.
- * Clean and accurate holes in multiple material types.
- * Proven flute geometries enable maximum spoil removal.
- * Combination of flute and tip geometry produces truer and rounder holes.
- * Copper brazed with optimum tip support.
- * High impact point of sale units available.
