

PTC2 Diamond Crowns

PTC Diamond crown cores are a blend of tungsten and diamond for drilling porcelain, marble and ceramic tiles. Extremely durable, they will last up to 1000 holes in porcelain. Small diameter crowns require a water feed adaptor, drive guide and water feed pressure pump. The large diameter crowns can be purchased in a starter set, which includes all necessary components except the water feed pressure pump. For single large diameter crown purchases, it is necessary to purchase an 8mm pilot drill, a water feed adaptor and a water feed pressure pump.
