

Heavy Duty Core Drills

Ideal for concrete and slab work. Milled from solid stock of Sheffield steel. Tough enough for drilling large diameter holes up to 6 inches in concrete and other masonry materials. Versatility is available with K Taper adaptors. Can then be used in a wide range of machines using drill holders as shown on page 10. Extension rods, pilot drills, extractor drifts and adaptors all support the ability to switch machines, core diameters, lengths, etc. to match user requirements.
