

Light Weight Core Drills

Ideal for brick work and block work – NOT for concrete or slab work. Gives versatility of core drilling from 25 to 110mm diameter. Speeds of up to 35% faster and with minimal breakthrough not normally associated with core drilling. Lightweight, thin wall design, weighing 50% less than traditional core drills, meets less resistance when cutting through masonry materials. More accurate holes can be drilled faster, and breakthrough minimised by drilling on rotation only mode, in softer materials. Innovative self locking mechanism, for securing the pilot drill, eliminates the need for awkward grub screws by using a unique ball locking operation. No need for extra tools or spanners, the core body actually fixes the pilot in place as it screws into the adaptor. Ideal for plumbing and electrical applications in brick, block, masonry, etc.. Adaptors for SDS+ or hexagonal shank (for use in 3 jaw chucks) in either 100 or 300mm long, add to the versatility.

*Not to be used with 300mm adaptors
